## CONTENTS

Note: Could I use `tcolorbox` to display some code?

It would be better to display code such as this, but with syntax highlight:

**Hint:** `#include <stdio.h>`

```
int main(int argc, char *argv[]) {  
    printf("hello, world!\n");  
}
```

This block is ugly, because it is wider than the page.

```
#include <stdio.h>  
  
int main(int argc, char *argv[])  
{  
    printf("hello, world!\n");  
}
```
